

- Doctors assign nurses to assist them. A doctor can assign zero or one nurse but each nurse is assigned to only one doctor.
- Each pharmacy has a pharmacist who gives the drugs to the patients according to their prescription.
- Drugs can be identified by trade name, manufacture date, formula, expiration date, date of issue, pharmacy and pharmacist who issued the drug.
- The weight and disease of patients are recorded.
- Each patient is assigned a nurse but not every nurse is assigned a patient.
